Preamble

At the dawn of civilizations, human settlements were close to water bodies as water has always been the basis of existence of life on planet earth. In Anthropocene era, the economic growth and development is unsustainable. Rapid industrialization, change in land use patterns coupled with over exploitation of natural resources results in disruption of ecosystem processes and functions. The extent of these changes are more pronounced on water and air quality of urban ecosystem.

Industrial effluents, untreated sewage water and encroachment of wetlands are some of the major factors for deterioration of water quality and depletion of ground water in urban ecosystem. Moreover, increased vehicles and industries are emitting harmful gaseous pollutants and particulate matter. Also, construction work contributes to dust pollution in environment. Further, disposal of diverse solid waste in urban ecosystem requires a huge land, causing adverse impact on environment. These pollutants are not only threats to urban flora and fauna but also degrades quality of life and cause public health risks.

On the occasion of World Water Day on 22nd March 2016, Eco club Shivaji College is organizing a **National Seminar on Water and Air Quality in Urban Ecosystem** to provide a platform for the interaction of young minds with experts, policy makers and NGOs. Also, it is an effort to spread awareness about current issues on water and air quality to ensure sustainability of urban ecosystem

THE FOCUS OF THE SEMINAR WILL BE ON FOLLOWING THEMES
