(57) Abstract :
 ABSTRACT [500] Our InventionA medicine and general use bottle with internal spoon attached to cap of the bottle” is a patent a thought of a medication syrup bottle or a general bottle which can be used for liquid like water or juice in which advancement is in the cap of the jug. The cap will have a spoon joined or fixed appropriately from inside. Whenever bottle is shut with cap, the spoon will be inside the container. It's benefit is that the client of the syrup will no more require a different spoon or bowl or cap to take the medication. Also, will be liberated from additional work of cleaning the spoon or cap when utilization of medication. Likewise, during venture this kind of container will be extremely convenient. The spoon will be of standard size as 5ml or 10 ml according to ordinary necessity of the medication with marking for measurements. The material of the spoon will be same as that of container. This will guarantee that the medication won't foster any new response with the material of the spoon and will be protected to utilize. A medication bottle with a little spoon has a place with a medication bundling compartment and for the most part settle the issue that disinfection can't be ensured when individuals take drugs from normal medication bottles by hands straightforwardly. The medication bottle basically includes a jug body and a container cap, an opening of the medication bottle is associated with the jug cap in a strung way, and the little spoon is organized in the inward mass of the jug cap and reaches out into the jug body. The little spoon and the container cap are organized fundamentally, prescriptions can be straightforwardly taken by the guide of the little spoon after the jug cap is unscrewed, and the medication bottle is advantageous being used and is clean and protected as hands of clients don't contact with the drugs.
